Factsheet valid to	(ongoing)

CALCULATION DETAIL

** Where no ticks were traded in the minute prior to the assessment time, an assessment is derived based on the following priority: 1). Relationship to traded product for same market based on differential at point where both last traded 2). Adjustment to WTI / Brent price based on differential at point where both last traded 3). Last traded price. In the event that there are no trades or a paucity of trades, GX will determine the relevant value based on its expertise and knowledge of markets. GX could base its determination, but not solely, on bids and offers in futures markets, relational values in other futures indicators and/or bids and offers in related markets.
